

COVER LETTER – EMMELIN LARINA TVEDT NILSEN

Dear reader,

I'm a Frontend Development student with a background in 3D art and animation, currently studying at Noroff. My passion lies where creativity meets logic. Combining design thinking with clean, functional code. Whether I'm structuring a responsive layout or experimenting with visual concepts, I love transforming ideas into experiences that feel both intuitive and alive.

My previous degree in 3D Graphics at Kristiania University College taught me to see design from multiple perspectives — colour, form, and storytelling. Now, through frontend development, I'm learning how those same principles can be translated into user-friendly interfaces and digital interactions. I thrive on problem-solving, structure, and that small "aha" moment when something finally clicks after hours of tweaking.

I'm a fast learner, curious by nature, and motivated by challenges that let me grow technically while staying true to my creative roots. My goal is to create meaningful, engaging, and visually consistent web experiences, crafted with care and a touch of personality.

Thanks for taking the time to explore my work. I'm always open to new collaborations, internships, or a good conversation over design, code, and creativity.

Warm regards,

Emmelin Larina Tvedt Nilsen
Frontend Development Student
